# DATABASE SYSTEMS

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

---

**Book by**  
**DAVID M. KROENKE and DAVID J. AUER**  
**DATABASE CONCEPTS, 4<sup>th</sup> Edition**

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

## Course Web Page

<http://www.aue.auc.dk/~akbar/2011/database-2011.html>

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

## F4-2: Database Design

- Objectives:** To enable students to **apply principles for design of simple relational database systems**
- Contents:**
- Basic concepts and principles of database systems
    - o ER-models
    - o Converting to relational models
    - o 1st-3rd normal forms
    - o SQL
- Prerequisites:** Level of knowledge following the 3rd semester and OO programming from the same semester
- Weight:** 1 ECTS
- Type:** SE
- Examination:** The form of examination is determined by the study board before semester starts, or is chosen by the course-responsible in consultation with the students at latest at the second lecture of the course ( in accordance with the framework provision)

## Key Topics of the Course

- Design of simple relational database systems
- Database processing
- Basic SQL for database definition and manipulation
- Entity-relationship model and illustration of data modelling
- Transformation of E-R data models to relational designs

## Chapter Objectives

---

- Potential problems with lists
- Understand the reasons for using a database
- Understand how related tables avoid the problems of lists
- Learn the components of a database system
- Learn the elements of a database
- Learn the purpose of the database management system (DBMS)
- Understand the functions of a database application

## Purpose of a Database

---

- To keep track of things
- Unlike a list or spreadsheet, a database may store information that is more complicated than a simple list

## Some Key Questions About Database

- The purpose of a **database** is to help people track things of interest to them.
- Data is stored in **tables**, which have rows and columns like a spreadsheet.
- Database typically have multiple tables, where each table stores data about different things.
- Each row in a table stores data about an occurrence or **instance** of the thing of interest.
- A database stores **data** and **relationships**
- **Simple question What is a database ?**
- **What is data ?**
- **What is information ? What is Knowledge ?**

## Problems with Lists

	A	B
1	<b>Name</b>	<b>Email</b>
2	Andrews, Matthew	<a href="mailto:MattA@ourcampus.edu">MattA@ourcampus.edu</a>
3	Brisbon, Lisa	<a href="mailto:LisaB@ourcampus.edu">LisaB@ourcampus.edu</a>
4	Fischer, Douglas	<a href="mailto:DougF@ourcampus.edu">DougF@ourcampus.edu</a>
5	Hwang, Terry	<a href="mailto:TerryH@ourcampus.edu">TerryH@ourcampus.edu</a>

4	Fischer, Douglas	<a href="mailto:DougF@ourcampus.edu">DougF@ourcampus.edu</a>	Baker	<a href="mailto:Baker@ourcampus.edu">Baker@ourcampus.edu</a>
5	Hwang, Terry	<a href="mailto:TerryH@ourcampus.edu">TerryH@ourcampus.edu</a>	Taing	<a href="mailto:Taing@ourcampus.edu">Taing@ourcampus.edu</a>
6	Marino, Chip	<a href="mailto:ChipM@myserver.com">ChipM@myserver.com</a>	Tran	<a href="mailto:Tran@ourcampus.edu">Tran@ourcampus.edu</a>
7	Lai, Tzu	<a href="mailto:Tzul@ourcampus.edu">Tzul@ourcampus.edu</a>	Valdez	<a href="mailto:Valdez@ourcampus.edu">Valdez@ourcampus.edu</a>
8	Thompson, James	<a href="mailto:JamesT@myserver.com">JamesT@myserver.com</a>	Taing	<a href="mailto:Taing@ourcampus.edu">Taing@ourcampus.edu</a>

**Do you see any Problem with this list ?**

### Problems with Lists

	A	B	C	D
1	<b>Name</b>	<b>Email</b>	<b>Adviser</b>	<b>AdviserEmail</b>
2	Andrews, Matthew	<a href="mailto:MattA@ourcampus.edu">MattA@ourcampus.edu</a>	Baker	<a href="mailto:Baker@ourcampus.edu">Baker@ourcampus.edu</a>
3	Brisbon, Lisa	<a href="mailto:LisaB@ourcampus.edu">LisaB@ourcampus.edu</a>	Valdez	<a href="mailto:Valdez@ourcampus.edu">Valdez@ourcampus.edu</a>
4	Fischer, Douglas	<a href="mailto:DougF@ourcampus.edu">DougF@ourcampus.edu</a>	Baker	<a href="mailto:Baker@ourcampus.edu">Baker@ourcampus.edu</a>
5	Hwang, Terry	<a href="mailto:TerryH@ourcampus.edu">TerryH@ourcampus.edu</a>	Taing	<a href="mailto:Taing@ourcampus.edu">Taing@ourcampus.edu</a>
6	Marino, Chip	<a href="mailto:ChipM@myserver.com">ChipM@myserver.com</a>	Tran	<a href="mailto:Tran@ourcampus.edu">Tran@ourcampus.edu</a>
7	Lai, Tzu	<a href="mailto:Tzul@ourcampus.edu">Tzul@ourcampus.edu</a>	Valdez	<a href="mailto:Valdez@ourcampus.edu">Valdez@ourcampus.edu</a>
8	Thompson, James	<a href="mailto:JamesT@myserver.com">JamesT@myserver.com</a>	Taing	<a href="mailto:Taing@ourcampus.edu">Taing@ourcampus.edu</a>
9		??	Greene	<a href="mailto:Greene@ourcampus.edu">Greene@ourcampus.edu</a>

Deleted row—  
Too much lost

Changed row—  
Inconsistent data

Inserted row—  
Data missing

**Do you see any problem if you remove student Marino from the list ?**

### Problems with Lists

	A	B	C	D
1	<b>Name</b>	<b>Email</b>	<b>Phone</b>	<b>Dorm</b>
2	Andrews, Matthew	MathA@ourcampus.edu	301.555.1234	McKinley
3	Brisbon, Lisa	LisaB@ourcampus.edu	301.555.3335	Dorsett
4	Fischer, Douglas	DougF@ourcampus.edu	301.555.1688	McKinley
5	Hwang, Terry	TerryH@ourcampus.edu	301.555.1837	McKinley
6	Ingrum, Garret	GarretI@somewhere.com	301.555.3680	Dorsett
7	Marino, Chip	ChipM@missouri.com	301.555.8685	Johnson
8	Lai, Tzu	TzuL@ourcampus.edu	301.555.4139	McKinley
9	Thompson, James	JamesT@myserver.com	301.555.3240	Johnson

- Inserted row
- Deleted row
- Changed row

**Do you see any problem if you remove student Marino from the list ?**

**Theme ?**

### List Modification Issues

If Adviser Baker is changed to Taing, need to change AdviserEmail as well— if changed to Valdez, need to change AdviserEmail, Department and Admin

	A	B	C	D	E	F	G
1	<b>LastName</b>	<b>FirstName</b>	<b>Email</b>	<b>AdviserName</b>	<b>AdviserEmail</b>	<b>Department</b>	<b>AdminName</b>
2	Andrews	Matthew	MathA@ourcampus.edu	Baker	Baker@ourcampus.edu	Accounting	Smith
3	Brisbon	Lisa	LisaB@ourcampus.edu	Valdez	Valdez@ourcampus.edu	Chemistry	Chaplin
4	Fischer	Douglas	Fischer@ourcampus.edu	Baker	Baker@ourcampus.edu	Accounting	Smith
5	Hwang	Terry	TerryH@ourcampus.edu	Taing	Taing@ourcampus.edu	Accounting	Smith
6	Lai	Tzu	TzuL@ourcampus.edu	Valdez	Valdez@ourcampus.edu	Chemistry	Chaplin
7	Marino	Chip	ChipM@missouri.com	Tae	Tae@ourcampus.edu	Info-Systems	Rogers
8	Thompson	James	Thompson@ourcampus.edu	Taing	Taing@ourcampus.edu	Accounting	Smith
9	???	???	???	???	???	Biology	Kelly

- Deleted row—Student, Adviser and Department data lost
- Inserted row—both Student and Adviser data missing

## Problems with Lists: Redundancy

- In a list, each row is intended to stand on its own. As a result, the same information may be entered several times
  - For Example:  
A list of Projects may include the Project Manager's Name, ID, and Phone Extension.
  - If a particular person is managing 10 projects, his/her information would have to be entered 10 times

## Problems with Lists: Multiple Themes

- In a list, each row may contain information on more than one theme. As a result, needed information may appear in the lists only if information on other themes is also present
  - For Example:  
A list of Projects may include Project Manager information (Name, ID, and Phone Extension) and Project information (Name, ID, StartDate, Budget) in the same row.

## List Modification Issues

---

- Redundancy and multiple themes create modification problems
  - Deletion problems
  - Update problems
  - Insertion problems

## Addressing the Information Complexities

---

- Relational databases are designed to address many of the information complexity issues

## Relational Databases

- A **relational database** stores information in tables. Each informational topic is stored in its own table.
- In essence, a relational database will break-up a list into several parts. **One part for each theme in the list.**
- A Project List would be divided into a CUSTOMER Table, a PROJECT Table, and a PROJECT\_MANAGER Table.

## Putting the Pieces Back Together

- In our relational database we broke apart our list into several tables. Somehow the tables must be **joined** back together.
- In a relational database, tables are joined together using the **value of the data.**
- If a PROJECT has a **CUSTOMER**, the **Customer\_ID is stored as a column in the PROJECT table.** The value stored in this column can be used to retrieve specific customer information from the CUSTOMER table.

## Sounds like More Work, Not Less

- A relational database is **more complicated than a list**
- However, a relational database **minimizes data redundancy**, preserves complex relationships among topics, and allows for partial data
- Furthermore, a relational database provides a solid foundation for **user forms and reports**

## Relational Database Example

STUDENT data linked to ADVISER data via AdviserLastName

AdviserLastName	AdviserFirstName	AdviserEmail
<b>Linda</b>	Linda	Baker@ourcampus.edu
Greene	George	Greene@ourcampus.edu
Taing	Susan	Taing@ourcampus.edu
Tran	Tran	Tran@ourcampus.edu
Valdez	Richard	Valdez@ourcampus.edu

StudentLastName	StudentFirstName	StudentEmail	Phone	DOB	AdviserLastName
<b>Matthew</b>	Matthew	Andrews@ourcampus.edu	301.555.2222	McKinley	Baker
Brisbon	Lisa	Brisbon@ourcampus.edu	301.555.2241	Dogett	Valdez
Fischer	Douglas	Douglas@ourcampus.edu	301.555.2257	McKinley	Baker
Huang	Terry	Huang@ourcampus.edu	301.555.2229	McKinley	Taing
Lei	Tzu	Lei@ourcampus.edu	301.555.2231	McKinley	Valdez
Mariano	Chip	Mariano@ourcampus.edu	301.555.2243	Johnson	Tran
Thompson	James	Thompson@ourcampus.edu	301.555.2245	Johnson	Taing

## Student & Adviser Relational Design

## A Relational Database Solves the Problems of Lists

- Changed data—data remains consistent
- Inserted data—no STUDENT data required
- Deleted data—no ADVISOR data lost

AdviserLastName	AdviserFirstName	AdviserEmail
Baker	Linda	Baker@ourcampus.edu
Greene	George	Greene@ourcampus.edu
Taing	Susan	STaing@ourcampus.edu
Tran	Ken	Tran@ourcampus.edu
Valdez	Richard	Valdez@ourcampus.edu
Yeats	Bill	Yeats@ourcampus.edu

StudentLastName	StudentFirstName	StudentEmail	Phone	Dorm	AdviserLastName
Andrews	Matthew	Andrews@ourcampus.edu	301.555.2225	McKinley	Baker
Brisbon	Lisa	Brisbon@ourcampus.edu	301.555.2241	Dorsett	Valdez
Fischer	Douglas	Douglas@ourcampus.edu	301.555.2257	McKinley	Baker
Hwang	Terry	Hwang@ourcampus.edu	301.555.2229	McKinley	Taing
Lee	Tzu	Lee@ourcampus.edu	301.555.2231	McKinley	Valdez
Marino	Chip	Marino@ourcampus.edu	301.555.2243	Johnson	Tran
Thompson	James	Thompson@ourcampus.edu	301.555.2245	Johnson	Taing

Do you see any Problem ?

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

## The Department, Advisor and Student Tables

- Can insert DEPARTMENT data as needed—no ADVISER or STUDENT data required
- Can change STUDENT Adviser name as needed—new value is linked to its own data
- Can delete STUDENT data as needed—no DEPARTMENT or ADVISER data lost

DepartmentName	DepartmentPhone	AdminLastName	AdminFirstName
Accounting	301.555.1011	Smith	Shawna
Biology	301.555.1021	Kelly	Chris
Chemistry	301.555.1031	Chaplin	Robin
Info Systems	301.555.1041	Rogers	Aaron

AdviserLastName	AdviserFirstName	AdviserEmail	Department
Baker	Linda	Baker@ourcampus.edu	Accounting
Greene	George	Greene@ourcampus.edu	Biology
Taing	Susan	STaing@ourcampus.edu	Accounting
Tran	Ken	Tran@ourcampus.edu	Info Systems
Valdez	Richard	Valdez@ourcampus.edu	Chemistry

StudentLastName	StudentFirstName	StudentEmail	Phone	Dorm	AdviserLastName
Andrews	Matthew	Andrews@ourcampus.edu	301.555.2225	McKinley	Baker
Brisbon	Lisa	Brisbon@ourcampus.edu	301.555.2241	Dorsett	Valdez
Fischer	Douglas	Douglas@ourcampus.edu	301.555.2257	McKinley	Baker
Hwang	Terry	Hwang@ourcampus.edu	301.555.2229	McKinley	Taing
Lee	Tzu	Lee@ourcampus.edu	301.555.2231	McKinley	Valdez
Marino	Chip	Marino@ourcampus.edu	301.555.2243	Johnson	Tran
Thompson	James	Thompson@ourcampus.edu	301.555.2245	Johnson	Taing

Student, Department & Adviser Relational Design

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

## Processing Relational Tables

- So we have used the tables to create a relational database, but now the question is we would like to view the data in the form of original list.
- The answer is SQL (Structured Query Language) which defines data definition and manipulation.

## Structured Query Language (SQL)

- **Structured Query Language (SQL)** is an international standard for creating, processing and querying databases and their tables.
- Many database applications use SQL to **retrieve, format, report, insert, delete, and/or modify** data for users.
- One needs to know the core SQL statements.

### SQL Example (Continued)

```

SELECT CUSTOMER.CustomerLastName,
       CUSTOMER.CustomerFirstName,
       CUSTOMER.Phone,
       COURSE.CourseDate, ENROLLMENT.AmountPaid,
       COURSE.Course, COURSE.Fee
FROM   CUSTOMER, ENROLLMENT, COURSE
WHERE  CUSTOMER.CustomerNumber
      = ENROLLMENT.CustomerNumber
AND
      COURSE.CourseNumber
      = ENROLLMENT.CourseNumber;
    
```

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

1-27

### SQL Example

Can change COURSE CourseDate without problems

Can insert new COURSE data as needed

Can delete ENROLLMENT rows as needed—no adverse consequences

CustomerNumber	CustomerLastName	CustomerFirstName	Phone
1	Johnson	Ariel	206-567-1234
2	Green	Robin	425-678-8765
3	Jackson	Charles	360-789-3456
4	Pearson	Jeffery	206-567-2345
5	Sears	Miguel	360-789-4567
6	Kyle	Leah	425-678-7654
7	Myers	Lynda	360-789-5678

CourseNumber	Course	CourseDate	Fee
1	Adv Pastels	10/1/2009	\$500.00
2	Beg Oils	9/15/2009	\$350.00
3	Int Pastels	3/15/2009	\$350.00
4	Beg Oils	10/15/2009	\$350.00
5	Adv Pastels	11/15/2009	\$500.00

CustomerNumber	CourseNumber	AmountPaid
1	1	\$250.00
2	3	\$350.00
2	2	\$350.00
3	1	\$500.00
4	1	\$500.00
5	2	\$350.00
6	5	\$250.00
7	4	\$0.00
0	0	\$0.00

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

1-28

## SQL Example Results

CustomerLastName	CustomerFirstName	Phone	CourseDate	AmountPaid	Course	Fee
Johnson	Ariel	206-567-1234	10/1/2009	\$250.00	Adv Pastels	\$500.00
Johnson	Ariel	206-567-1234	3/15/2009	\$350.00	Int Pastels	\$350.00
Green	Robin	425-678-8765	9/15/2009	\$350.00	Beg Oils	\$350.00
Jackson	Charles	360-789-3456	10/1/2009	\$500.00	Adv Pastels	\$500.00
Pearson	Jeffery	206-567-2345	10/1/2009	\$500.00	Adv Pastels	\$500.00
Sears	Miguel	360-789-4567	9/15/2009	\$350.00	Beg Oils	\$350.00
Kyle	Leah	425-678-7654	11/15/2009	\$250.00	Adv Pastels	\$500.00
Myers	Lynda	360-789-5678	10/15/2009	\$0.00	Beg Oils	\$350.00

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

1-29

## Database Systems

- The **four components of a database system** are:
  1. Users
  2. Database Application
  3. Database Management System (DBMS)
  4. Database

Course: DE4, Course Teacher: D. M. Akbar Hussain  
Department of Electronic Systems

1-30

## Components of a Database System

## Users

- A **user** of a database system will
  - Use a database application to track things
  - Use forms to enter, read, delete and query data
  - Produce reports

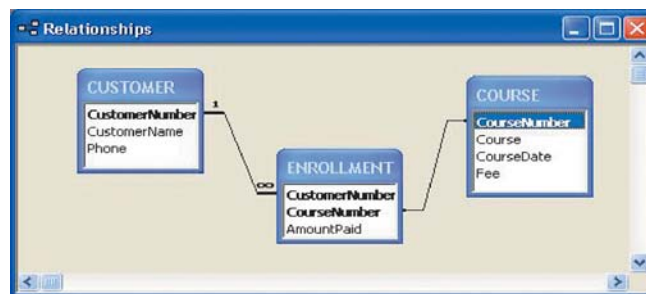

## The Database

- A database is a *self-describing* collection of *related* records.
- Self-describing
  - The database itself contains the definition of its structure, the contents of the database can always be determined by looking inside the database itself.
  - Metadata is data describing the structure of the database data
- Tables within a relational database are related to each other.

## Relationship & Contents of Database

## Database Management System (DBMS)

- A **database management system (DBMS)** serves as an **intermediary** between database applications and the database
- The DBMS **manages and controls** database activities
- The DBMS **creates, processes and administers** the databases it controls

## Functions of a DBMS

1. Create databases
2. Create tables
3. Create supporting structures
4. Read database data
5. Modify database data (insert, update, delete)
6. Maintain database structures
7. Enforce rules
8. Control concurrency
9. Provide security
10. Perform backup and recovery

## Referential Integrity Constraints

- The DBMS will enforce many constraints
- **Referential integrity constraints** ensure that the values of a column in one table are valid based on the values in another table
  - **If a 5 was entered as a CustomerID in the PROJECT table, a Customer having a CustomerID value of 5 must exist in the CUSTOMER table**

## Database Applications

- A **database application** is a set of one or more computer programs that serves as an intermediary between the user and the DBMS

## Functions of Database Applications

1. Create and process forms
2. Process user queries
3. Create and process reports
4. Execute application logic
5. Control database applications

## Personal Database Systems

- Personal database systems typically consist:
  - One application
  - Only a few tables
  - Simple in design
  - Involve only one computer
  - Support one user at a time

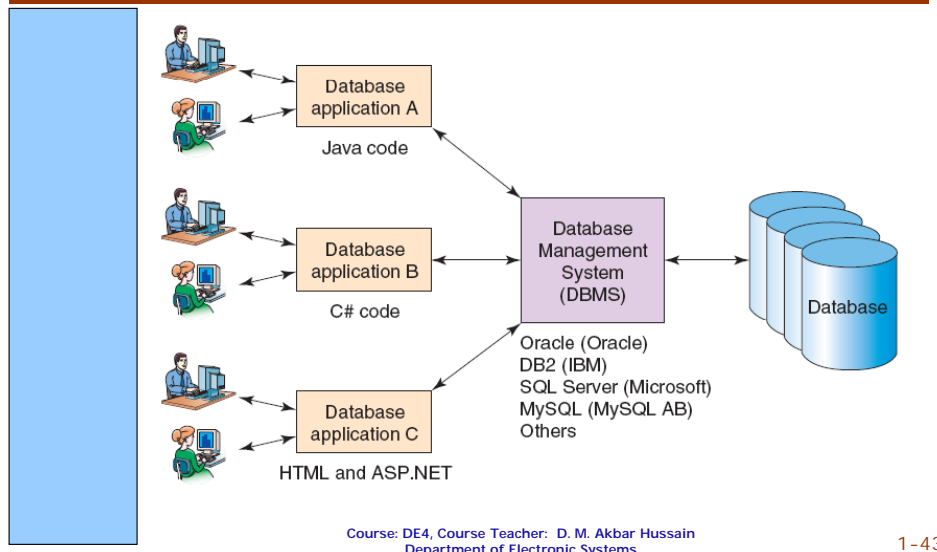

## Personal Database Systems

## Enterprise-class Database Systems

- Enterprise-Class database systems typically:
  - Support several users simultaneously
  - Include more than one application
  - Involve multiple computers
  - Are complex in design
  - Have many tables
  - Have many databases

## Organizational Database Systems

## Commercial DBMS Products

- Example Desktop DBMS Products
  - Microsoft Access
- Example Organizational DBMS Products
  - Microsoft's SQL Server
  - Oracle's Oracle
  - Sun Microsystem's MySQL
  - IBM's DB2
