

MM2 Essentials for Feedback Control

Readings:

- Section 2.1 (models of mechanical systems, p.20-33);
- Section 3.1 (Laplace transform, p.86-110)
- Section 3.2 (Block diagram, p.111-118)

MM1: Basic Concept (I): System and its Variables

- A **system** is a collection of components which are coordinated together to perform a function
- Systems interact with their **environment**. The interaction is defined in terms of **variables**
 - System inputs
 - System outputs
 - Environmental disturbances
- **Dynamic system** is a system whose performance could change according to time

MM1: Basic Concept (II): Control

- **Control** is a process of causing a system (output) variable to conform to some desired status/value
- **Manual Control** is a process where the **control** is handled by human being(s)
- **Automatic Control** is a control process which involves machines only

Control Theory and Modelling

3

MM1: Control Classification

- **Open-loop Control:** A control process which does not utilize the feedback mechanism, i.e., the output(s) has no effect upon the control input(s)
- **Closed-loop Control:** A control process which utilizes the feedback mechanism, i.e., the output(s) does have effect upon the control input(s)

Control Theory and Modelling

5

MM1: System Model: Transfer Function

- Num-den form $\text{sys}=\text{tf}(\text{num},\text{den})$

$$G(s) = \frac{Y(s)}{U(s)} = \frac{b_1 s^m + b_2 s^{m-1} + \dots + b_{m+1}}{a_1 s^n + a_2 s^{n-1} + \dots + b_{n+1}}, \quad e.g., \quad G(s) = \frac{K}{s^2 + 2\zeta\omega s + \omega^2}$$

- Zero-pole form $\text{sys}=\text{zpk}(Z,P,K)$

$$G(s) = \frac{Y(s)}{U(s)} = K \frac{\prod_{i=1}^m (s - z_i)}{\prod_{i=1}^n (s - p_i)} \quad e.g., \quad G(s) = \frac{K}{(s - p_1)(s - p_2)}$$

- Overview of system features

7

What is the new for today?

1/31/2012

Control Theory and Modelling

8

The Goals of this lecture (MM2) ...

- Essentials in using (ordinary) differential equation model
 - Why use ODE model
 - Linear vs. nonlinear ODE models
 - How to solve an ODE
 - Numerical methods (Matlab)
- Refresh of Laplace transform
 - Key features
 - Transformation from ODE to TF model
- Block diagram transformation
 - Composition /decomposition
 - Signal-flow graph

1/31/2012

Control Theory and Modelling

9

The Goals of this lecture...

- Essentials in using (ordinary) differential equation model
 - Why use ODE model
 - Linear vs. nonlinear ODE models
 - How to solve an ODE
 - Numerical methods (Matlab)
- Laplace transform
 - Key features
 - Transformation from ODE to TF model
- Block diagram transformation
 - Composition /decomposition
 - Signal-flow graph

Control Theory and Modelling

10

Essentials in ODE - What's an ODE Model (I)?

- An **ODE model** is a set of ODEs that describe the dynamic behavior of the considered system (in terms of system input and output variables – **IO Model**)

$$L_a \frac{di_a}{dt} + R_a i_a = v_a - K_e \dot{\theta}_m$$

$$J_m \ddot{\theta}_m + b \dot{\theta}_m = K_t i_a - T_e - T_f$$

- Variables: input, output, **internal**

$$J_m \ddot{\theta}_m + \left(b + \frac{K_t K_e}{R_a}\right) \dot{\theta}_m = \frac{K_t}{R_a} v_a - T_e - T_f$$

1/31/2012

Control Theory and Modelling

11

Essentials in ODE - What's an ODE Model (II)?

- A general ODE model:

$$a_n \frac{d^n y(t)}{dt^n} + \dots + a_1 \frac{dy(t)}{dt} + a_0 y(t) = b_m \frac{d^m u}{dt^m} + \dots + b_1 \frac{du}{dt} + b_0 u$$

- Assumption: $n > m$
- Single-input single-output (**SISO**) model
- SIMO, MISO, MIMO models
- Linear system
- Time-invariance
- Linear Time-Invariance (**LTI**) model

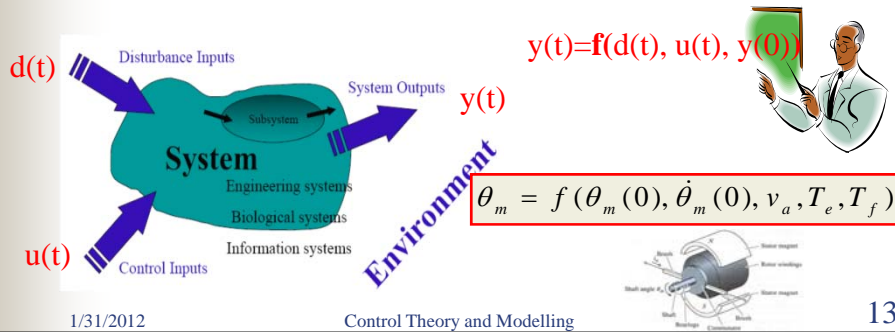

1/31/2012

Control Theory and Modelling

12

Essentials in ODE – Why Use ODE Model?

- The ODE model can be naturally obtained through modeling procedure by following some physical principles
 Get your feeling of that through Modeling lectures...
- The ODE model is an efficient but implicit description of the dynamic system's behavior

Essentials in ODE –How to interperate ODE Model?

- The ODE model is an implicit description of the dynamic system's behavior

$$J_m \ddot{\theta}_m + (b + \frac{K_r K_e}{R_a}) \dot{\theta}_m = \frac{K_r}{R_a} v_a - T_e - T_f$$

Solution of ODE!

Essentials in ODE – Uniqueness of ODE Solution

$$J_m \ddot{\theta}_m + \left(b + \frac{K_t K_e}{R_a}\right) \dot{\theta}_m = \frac{K_t}{R_a} v_a - T_e - T_f$$

Solution of ODE
Is an explicit model

$$\theta_m = f(\theta_m(0), \dot{\theta}_m(0), v_a, T_e, T_f)$$

$$y(t) = f(d(t), u(t), y(0))$$

Conditions for unique solution of an ODE:

- Initial conditions
- Lipschitz condition

1/31/2012

Control Theory and Modelling

15

Essentials in ODE – How to Solve an ODE?

$$J_m \ddot{\theta}_m + \left(b + \frac{K_t K_e}{R_a}\right) \dot{\theta}_m = \frac{K_t}{R_a} v_a - T_e - T_f$$

$$\theta_m(0) = \alpha, \quad \dot{\theta}_m(0) = \beta$$

$$\theta_m = f(\theta_m(0), \dot{\theta}_m(0), v_a, T_e, T_f)$$

Solving an ODE:

- Time-domain method
- Complex-domain method (**Laplace transform**)
- Numerical solution – CAD methods

1/31/2012

Control Theory and Modelling

16

Essentials in ODE – ODE Solvers in Matlab

Differential Equation Solver

MATLAB's functions for solving ordinary differential equations are

ode23 – 2nd/3rd order Runge-Kutta method

ode45 – 4th/5th order Runge-Kutta method

example,

$$\begin{aligned}\dot{x}_1 &= x_1(1-x_2^2) - x_2 \\ \dot{x}_2 &= x_1\end{aligned}$$

```
t0 = 0; tf = 20;
x0 = [0 0.25]'; % Initial
[t,x] = ode23('vdpol', [t0
plot (t, x)
```

Create a file called "vdpol.m",

```
function xdot = vdpol(t,x)
xdot = zeros(2,1);
xdot(1) = x(1).*(1-x(2).^2)-x(2);
xdot(2) = x(1);
```

"help ode23" to find out all the other options.

Laplace Transform - Definition

Time function $\xleftrightarrow{\text{Transform}}$ Complex function
 \leftrightarrow
 $(f(t) \leftrightarrow F(s), \text{ where } s = \sigma + j\omega, j = \sqrt{-1})$

Definitions:

- Laplace transform:

$$\mathcal{L}[f(t)] = \int_{0^-}^{\infty} f(t)e^{-st} dt = F(s)$$

- Inverse Laplace transform:

$$\mathcal{L}^{-1}[F(s)] = \frac{1}{2\pi j} \int_{\sigma-j\infty}^{\sigma+j\infty} F(s)e^{st} ds = f(t)$$

Laplace Transform – Basic Pairs

Time function $f(t)$	Laplace transform $F(s)$
$\delta(t)$, unit impulse	1
1, unit step	$\frac{1}{s}$
t	$\frac{1}{s^2}$
e^{-at}	$\frac{1}{s+a}$
$\sin \omega t$	$\frac{\omega}{s^2+\omega^2}$

Laplace Transform - Properties

$$(a) \mathcal{L}[\alpha f(t) + \beta g(t)] = \alpha F(s) + \beta G(s)$$

$$(b) \mathcal{L}^{-1}[\alpha F(s) + \beta G(s)] = \alpha f(t) + \beta g(t)$$

$$(c) \mathcal{L}\left[\frac{df(t)}{dt}\right] = sF(s) - f(0_-)$$

$$(d) \mathcal{L}\left[\int_{-\infty}^t f(t) dt\right] = \frac{F(s)}{s} + \frac{1}{s} \int_{-\infty}^0 f(t) dt$$

$$(e) \mathcal{L}[e^{-at} f(t)] = F(s + a)$$

$$(f) \lim_{t \rightarrow \infty} f(t) = \lim_{s \rightarrow 0} sF(s)$$

Laplace Transform – ODE

$$a_n \frac{d^n y(t)}{dt^n} + \dots + a_1 \frac{dy(t)}{dt} + a_0 y(t) = b_m \frac{d^m u}{dt^m} + \dots + b_1 \frac{du}{dt} + b_0 u$$

$$(a_n s^n + \dots + a_1 s + a_0) Y(s) = (b_m s^m + \dots + b_1 s + b_0) U(s)$$

$$G(s) = \frac{Y(s)}{U(s)} = \frac{b_m s^m + \dots + b_1 s + b_0}{a_n s^n + \dots + a_1 s + a_0}$$

$$\mathcal{L}\left[\frac{d^k f(t)}{dt^k}\right] = s^k F(s) - s^{k-1} f(0_-) - \dots - s f^{(k-2)}(0_-) - f^{(k-1)}(0_-)$$
